# What is Computing in KS1?

Computing is …………..

Computing is learning about how we can use technology in a safe and creative way. Computing allows us to be creative and to manipulate technology or use software to achieve something. For example, you might program a BeeBot toy to move around the room or you might create music, art, design or animations using different software.

Someone who studies computing is called a computer scientist.

We will be learning about some famous animators such as Matt Groening and William Hanna.

I will be learning these skills in (subject):

- Write and debug algorithms.

- Understand different uses of technology and where it's used.

- Use technology safely.

- Present information using different software.
